

A member writes:

"Some correspondence, not all recent, with Mr. Philip Seitner concerning *Magnolia officinalis* var. *biloba*, leads me to ask a wider audience this question.

Do seedlings of any known individual tree ever produce progeny with bilobed leaves?

- A. All the leaves?
- B. How soon after germination?
- C. What is the source of the parent?
- D. Can seed be obtained?

Yours with curiosity, Polly Hill
